# PSTN/SIP Landline Calls

Feature Overview

How It Works

The LobiBox PSTN/SIP Landline feature allows users to receive calls from the LobiBox like a standard telephone entry system. Users receive a standard phone call, can have a two-way audio call, and grant access.

Rollover Option

Users may opt to rollover their missed calls from the mobile app to a standard phone call, further ensuring calls are not missed.

Missed Calls & Voicemails

The PSTN/SIP Landline feature allows guests to leave voicemails for the user in the case a call is missed.
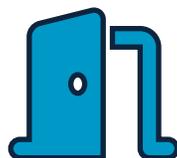

Calls From a Local Number

LobiBox can use local phone numbers to ensure users receive calls from a familar source, further reducing the chance of missed calls.
