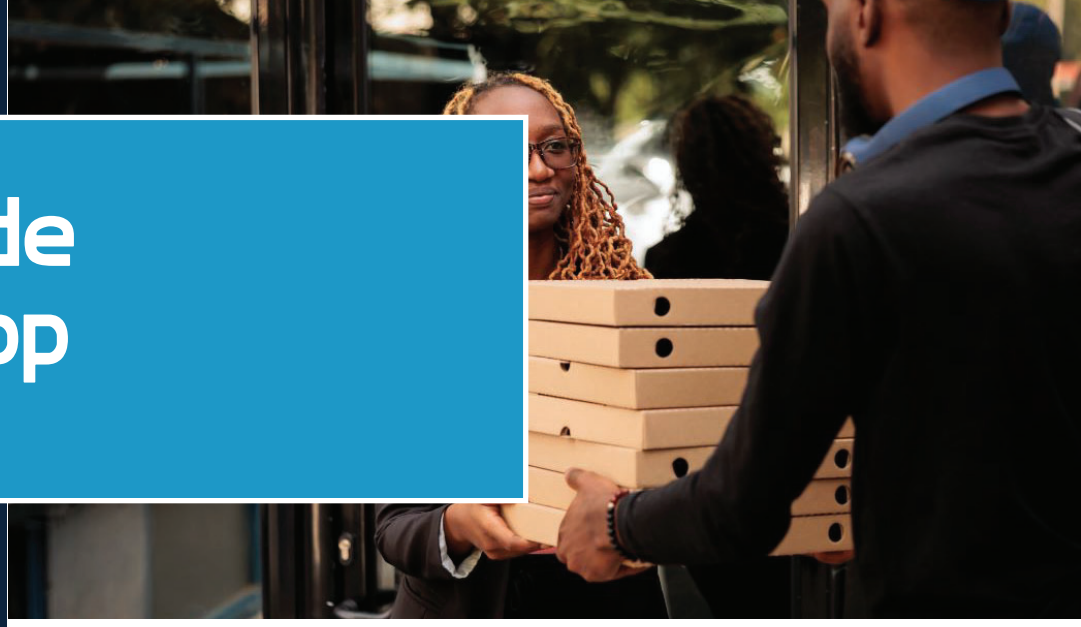
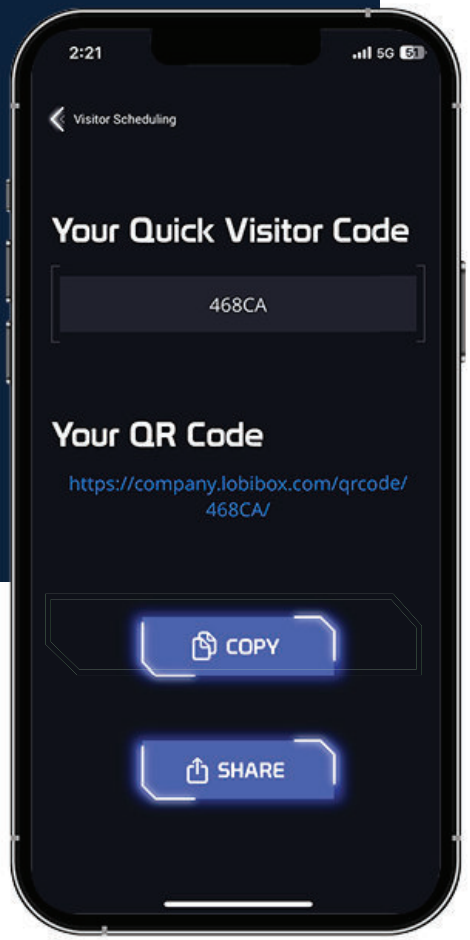
Quick Code Mobile App

Feature Overview





What is Quick Code?

The LobiBox Quick Code feature allows tenants to create a visitor access code with one click rather than entering all visitor details. Simply copy and paste the randomly generated code to send to guests.

Deliveries & Vendors

Emailing or texting the link to an access code is not ideal for all types of visitors - for deliveries, food, contractors or known guests, quickly generate a code to share.

Administrative Oversight

Administrators can set who has permission to create quick codes, the days and times that they can create codes, and through which access points.
